

CONSTANT-CURRENT LED DRIVER

IK2816

FEATURES

- 16 constant-current output channels
- Constant output current invariant to load voltage change
- Excellent output current accuracy:
 between channels: $<\pm 3\%$ (max.), and
 between ICs: $<\pm 6\%$ (max.)
- Output current adjusted through an external resistor
- Constant output current range per channel: 5-60 mA
- Schmitt trigger input
- 5V supply voltage
- Package Type: Pb-free package with thermal pad

ORDERING INFORMATION

Device	Operating Temperature Range	Package	Shipping
IK2816TSDT	$T_A = -40 \dots +85 \text{ }^\circ\text{C}$	TSSOP-20	Tape & Reel

Current Accuracy		Conditions
Between Channels	Between ICs	
$<\pm 3\%$	$<\pm 6\%$	$I_{OUT} = 5 \sim 60 \text{ mA}$

PRODUCT DESCRIPTION

IK2816 is an instant On/Off LED driver for lighting applications and exploits to enhance its output characteristics. At IK2816 output stage, sixteen regulated current ports are designed to provide uniform and constant current sinks for driving LEDs within a large range of VF variations.

IK2816 provides users 16-channel constant current ports to match LEDs with equal current. Users may adjust the output current from 5 mA to 60 mA through an external resistor, R_{ext} , which gives users flexibility in controlling the light intensity of LEDs. In addition, users can precisely adjust LED brightness from 0% to 100% via output enable (\overline{OE}) with Pulse Width Modulation.

Additionally, to ensure the system reliability, IK2816 is built with Thermal Protection (TP) function and thermal pad. The TP function protects IC from over temperature (165°C). Also, the thermal pad enhances the power dissipation. As a result, a large amount of current can be handled safely in one package.

APPLICATIONS

- Automotive interior lighting
- Channel letter
- Decoration lighting

TYPICAL APPLICATION CIRCUIT

Figure 1

FUNCTIONAL DIAGRAM

PIN CONFIGURATION

PIN DESCRIPTION

Pin Name	Function
GND	Ground terminal for control logic and current sink
$\overline{\text{OUT0}}\sim\overline{\text{OUT15}}$	Constant current output terminals
$\overline{\text{OE}}$	Output enable terminal When $\overline{\text{OE}}$ is active (low), the output pins are enabled; when $\overline{\text{OE}}$ is inactive (high), all output pins are turned OFF (blanked).
R-EXT	Terminal used to connected an external resistor (R_{ext}) for setting up output current for all output channels
VDD	5V supply voltage terminal
Thermal Pad	Power dissipation terminals connected to GND*

*To eliminate the noise influence, the thermal pad is suggested to be connected to GND on PCB. In addition, desired thermal conductivity will be improved, if a heat-conducting copper foil on PCB is soldered with thermal pad.

ABSOLUTE MAXIMUM RATINGS

Characteristic		Symbol	Rating	Unit
Supply Voltage		V_{DD}	0~7.0	V
Input Voltage		V_{IN}	-0.4~ $V_{DD} + 0.4$	V
Output Current		I_{OUT}	80*	mA
Sustaining Voltage		V_{DS}	27.0	V
GND Terminal Current		I_{GND}	1000	mA
Power Dissipation* (On PCB, $T_a=25\text{ }^\circ\text{C}$)	TSSOP20	P_D	0.85	W
Thermal Resistance** (By simulation)		$R_{th(j-a)}$	31.99	$^\circ\text{C/W}$
Empirical Thermal Resistance* (On PCB, $T_a=25\text{ }^\circ\text{C}$)			117	
Operating Junction Temperature		$T_{j,max}$	125	$^\circ\text{C}$
Operating Temperature		T_{opr}	-40~+85	$^\circ\text{C}$
Storage Temperature		T_{stg}	-55~+150	$^\circ\text{C}$

*Users must notice that the power dissipation (almost equaling to $I_{OUT} \times V_{DS}$) should be within the Safe Operation Area shown in Figure 7.

**Provided by factory.

*** Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

APPLICATION CIRCUITS

(a) IK2816 application circuit, where V_{LED} and V_{DD} share a single voltage source.

* $V_{LED} > V_{DS} + V_{F,LED} \times n$; $V_{F,LED}$: Forward voltage of LED; n: LED count

** $R1 = (V_{LED} - 5.1V) / I_{DD}$; refer to Electrical Characteristics for I_{DD}

*** $R2 \sim R17 = [V_{LED} - V_{DS} - (V_{F,LED} \times n)] / I_{LED}$

(b) IK2816 application circuit with dimming control by PWM signal, where V_{LED} and V_{DD} use voltage sources separately.

* $V_{LED} = V_{DS} + V_{F,LED} \times n$; $V_{F,LED}$: Forward voltage of LED; n: LED count

Figure 4

Constant Current

In LED lighting applications, IK2816 provides nearly no variation in current from channel to channel and from IC to IC. This can be achieved by:

- 1) The maximum current variation between channels is less than $\pm 5\%$, and that between ICs is less than $\pm 6\%$.
- 2) In addition, the current characteristic of output stage is flat and users can refer to the figure as shown below. The output current can be kept constant regardless of the variations of LED forward voltages (V_F). This guarantees LED to be performed on the same brightness as user's specification.

Figure 5

Setting Output Current

The output current of each channel (I_{out}) is set by an external resistor, R_{ext} . The relationship between I_{out} and R_{ext} is shown in the following figure 6 and Table.

Figure 6

I_{out} (mA)	R_{ext} (kΩ)
60	1.25
50	1.5
40	1.93
30	2.63
20	4.0
10	9.65
5	32.0

The output current can be calculated from the equation:

$$V_{R-EXT} = 1.24V;$$

$$R_{ext} = (V_{R-EXT} / I_{out}) \times 59 = (1.24V / I_{out}) \times 59,$$

$$I_{out} = (V_{R-EXT} / R_{ext}) \times 59 = (1.24V / R_{ext}) \times 59 \text{ within } \pm 6\% \text{ chip skew}$$

Where R_{ext} is the resistance of the external resistor connected to R-EXT terminal and V_{R-EXT} is the voltage of R-EXT terminal. The magnitude of current (as a function of R_{ext}) is around 56mA at 1.3kΩ and 30.5mA at 2.4kΩ.

Package Power Dissipation (PD)

The maximum power dissipation, $P_D(\max) = (T_{j,\max} - T_a) / R_{th(j-a)}$, decreases as the ambient temperature increases.

Figure 7

The maximum allowable package power dissipation is determined as $P_D(\max) = (T_{j,\max} - T_a) / R_{th(j-a)}$. When 16 output channels are turned on simultaneously, the actual package power dissipation is $P_D(\text{act}) = (I_{DD} \times V_{DD}) + (I_{OUT} \times \text{Duty} \times V_{DS} \times 16)$. Therefore, to keep $P_D(\text{act}) \leq P_D(\max)$, the allowable maximum output current as a function of duty cycle is:

$$I_{OUT} = \{ [(T_j - T_a) / R_{th(j-a)}] - (I_{DD} \times V_{DD}) \} / V_{DS} / \text{Duty} / 16,$$

where $T_j = 125^\circ\text{C}$;

Duty = t_{ON} / T ;

t_{ON} : the time of LEDs turning on; T : \overline{OE} signal period

*Note: The empirical thermal resistor $R_{th(j-a)} = 117^\circ\text{C/W}$; it is based on the following structure.

The PCB area $L2 \times W2$ is 4 times of the IC's area $L1 \times W1$.

The thickness of the PCB is 1.6 mm, copper foil 1 Oz. The thermal pad on the IC's bottom has to be mounted on the copper foil.

TP Function (Thermal Protection)

Thermal protection turns off the output current when the junction temperature rises to approximately 165°C, allowing the device to cool. When the junction temperature cools to approximately 145°C, the output current is turned on again. Depending on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit may cycle on and off. This limits the dissipation of the driver, protecting it from damage due to overheating.

Load Supply Voltage (V_{LED})

IK2816 is designed to operate with adequate V_{DS} to achieve constant current. V_{DS} together with I_{OUT} should not exceed the package power dissipation limit, P_{D(max)}.

As in Figure 8, V_{DS} = V_{LED} - V_F, and V_{LED} is the load supply voltage. P_{D(act)} will be greater than P_{D(max)}, if V_{DS} drops too much voltage on the driver. In this case, it is recommended to use the lowest possible supply voltage or to set an external voltage reducer, V_{DROP}.

A voltage reducer lets V_{DS} = (V_{LED} - V_F) - V_{DROP}.

Resistors can be used in the applications as shown in Figure 8.
