Note:

Maximum power P_{tot}, W, dissipated by IC at ambient temperature T_A, is calculated by formula:

$$P_{tot} = (150 - T_A) / R_{th\ j-a}, \quad (1)$$

150 – maximum permissible operating junction temperature, °C.

R_{th j-a} - thermal resistance junction ambient (for IC without heat sink), °C /W,

for ILE4276-AD, ILE4276-5.0, ILE4276-8.5, ILE4276-10 without heat sink R_{th ja} is equal 80 °C /W

for ILE4276-AD, ILE4276-5.0, ILE4276-8.5, ILE4276-10 ILE4275 without heat sink R_{th ja} is equal 65 °C /W

for IC with heat sink R_{th ja} is calculated by formula

$$R_{th\ j-a} = R_{th\ j-c} + R_{th\ c-a}, \quad (2)$$

R_{th j-c} - thermal resistance junction case, °C /W. R_{th jc} = 4 °C/W.

Thermal resistance case-ambient R_{th c-a} is determined by heat sink design and is selected by IC customer.

Application circuit and heat sink and ambient temperature have to provide junction temperature not more T_J ≤ 150 °C.

* Ambient temperature is indicated.
